With the implementation of the Radiant module in Radiology, the MRI screening form can now be completed in Epic.

Try it out!

1. When an MRI is ordered, a task will appear on the worklist to complete the MRI Screening Form. When ready to complete the form, click <Doc>.

2. The screening form will open up. There is some general information about the patient and the MRI that was ordered at the top left portion of the page. Below that is the screening form that needs to be completed. Any potential implants documented in Epic will show in the upper right hand portion of the screen. Complete the form and click <Nurse Doc Complete>.

1. When an MRI is ordered, a task will appear on the worklist to complete the MRI Screening Form. When ready to complete the form, click <Doc>.

2. The screening form will open up. There is some general information about the patient and the MRI that was ordered at the top left portion of the page. Below that is the screening form that needs to be completed. Any potential implants documented in Epic will show in the upper right hand portion of the screen. Complete the form and click <Nurse Doc Complete>. 

Click here when form is completed. This will complete the task on the worklist.
3. To go back and review the completed checklist, go to the Imaging tab in Chart Review. Select the MRI order, the details of the MRI will show in the preview portion of the screen (including the details of the completed screening form). At the bottom of the report, you will see the form history of who completed the form.

4. In cases where the patient is unconscious or the patient/family is unable to compete the screening form, the ordering/attending physician can completing the following portion from the previously used paper MRI screening form.

**Physician Safety Screening:** In the event the patient’s condition/situation prevents questions 1 through 7 and 14 from being answered on this form by Community Medical Center (CMC) staff, the questions must be completed by a physician prior to the patient being allowed into the MR scan room.

- In addition to completing this form, I have performed a physical exam to identify scars indicating prior surgery or trauma that may indicate possible implants or foreign objects. I have reviewed prior images to identify any possible implants or foreign objects. When prior images were not available of an area of concern, to include the chest and orbits, they were obtained and reviewed.

- I have not completed this form nor have I cleared this patient for a MR exam and request that the exam be canceled.
